

The Smart Way to Manage Supply Chain Compliance

There are many ways of approaching supply chain compliance, but do they provide full control, flexibility and transparency?

Exigo has been designed specifically to manage compliance across supply chains, providing a real-time, collaborative solution that will scale with any business.

Exigo is designed to give total supply chain compliance management and includes a host of features to help manage areas such as supplier on-boarding, risk profiling, pre-qualification, contractual compliance, audit management and performance monitoring.

Customisable compliance frameworks

Automated report generation

Document control and versioning

Cloud-based solution

In-built audit trail

Enterprise integration

Data exportation

Altius services integration

Exigo Features

Exigo allows users to generate their own compliance framework and workflows, either by adapting existing templates and processes or creating new ones using the built-in configuration tools

Automated Processes and Workflows

For increased protection, all processes and workflows are fully automated within Exigo, alerting users to what needs to be done, and automatic escalation ensures that nothing is missed.

Real-Time Status Tracking & Reporting

Exigo provides up-to-date information on suppliers and their compliance status for quick identification of issues or risks. This allows greater visibility of potential problems so they can be remedied before they happen.

Ready Made Templates

An extensive library of templates provides a solid starting point to get users up and running quickly. Templates available include Health and Safety, CSR, Anti-Corruption and Bribery, Information Security and many more....

Automated Report Generation

Advanced report design features allow the creation of scheduled reports which help to keep everyone informed of developments.

Document Control and Versioning

Document management is included as standard with Exigo and provides a central 'hub' for all documentation, and the time-machine feature allows all past versions to be available. Exigo also automatically informs suppliers and internal staff when documents need updating to ensure they are never out of date.

Cloud-Based Solution

Exigo is cloud-based, which means there's no hardware or software installation costs. The Altius implementation team will take care of getting the Exigo platform set up to automatically update and run the latest version.

In-Built Audit Trail

Exigo automatically records all activities and changes to information, meaning they can be retrieved easily at any time.

Data Exportation

Exigo provides tools for exporting data to a wide range of formats.

Enterprise Integration

Exigo can be integrated with any existing enterprise system already in place, so information from across the business can be shared efficiently.

Routing

Exigo manages assessment hierarchy and can be configured to direct the assessments to the right skilled people to evaluate them, this can be an internal or external resource.

Supporting Suppliers

From the day of implementation, Exigo is designed to support clients and suppliers throughout the year on Altius' 'live profile' framework to ensure everything is always up-to-date. This innovative, 'Live-Profile', customer focused approach is something that no other scheme offers and is one of the reasons clients and suppliers chose to work with Altius.

Requirements within the Exigo platform are specific to the client and based on risk, which saves suppliers time and money as they are only answering questions that are relevant to them and nothing else.

This tailored approach is popular with clients who want to support their suppliers, ease their workload and reduce risk in their supply chain effectively.

Exigo is designed and developed to specifically help any company that has a supply chain. It is fully flexible and robust to deal with any sized supplier database, can adapt as needs change, and works collaboratively with supply chains. This is what makes Exigo different to other 'out of the box' software platforms.

Altius work with clients to identify specific requirements and configure Exigo around those requirements for total supply chain compliance, it really is that simple!

Continuous Supply Chain Compliance with Exigo
